# Akagra Gangwar

6307642624 akagraace@gmail.com LinkedIn GitHub LeetCode

## Professional Summary

Computer Science Engineering (AI & ML) undergraduate graduating in 2027 with hands-on experience building full-stack and AI-powered software using JavaScript, React.js, Node.js, Express.js, Python, and REST APIs. Experienced in developing end-to-end applications with authentication, role-based access control, real-time features, LLM APIs, and computer vision. Strong foundation in Data Structures & Algorithms, OOP, DBMS, and software engineering, with practical experience using Git and GitHub.

## Education

**Bennett University** — Greater Noida, Uttar Pradesh
*B.Tech in Computer Science Engineering (AI & ML) | CGPA: 8.39* — *2023 – 2027*

**C.P. Vidya Niketan, Kaimganj** — Uttar Pradesh
*12th Standard – 80%* — *2022 – 2023*

**C.P. Vidya Niketan, Kaimganj** — Uttar Pradesh
*10th Standard – 88%* — *2020 – 2021*

## Skills

**Languages:** JavaScript, Python, Java, SQL
**Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Algorithmic Problem Solving
**AI/ML:** LLM APIs, RAG, Prompt Engineering, Machine Learning, TensorFlow, Computer Vision
**Software Engineering:** REST APIs, Node.js, Express.js, React.js, JWT,Vite
**Tools & Libraries:** Git, GitHub, Postman, OpenCV, NumPy, Scikit-learn, FFmpeg

## Projects

**AI-Powered Meeting Intelligence** — Feb 2026 – Apr 2026
*Tech: JavaScript, Node.js, Express.js, React.js, Groq API, LLaMA, FFmpeg, JWT, AES-256*

- Engineered an end-to-end speech-to-intelligence pipeline integrating Groq API with Whisper and parallel multi-model LLaMA inference (17B, 8B, 70B), supporting 15+ customizable formats and reducing manual documentation effort by 80%.
- Designed an automated FFmpeg-based audio processing pipeline to compress uploads up to 200MB below the 25MB API limit, achieving a 100% upload success rate.
- Built a production-oriented full-stack AI system with JWT authentication, AES-256 encryption for API keys, and dual-database support for local and production environments.

**ScreenGuard AI: Real-Time Display Liveness & Recapture Detection** — May 2026 – Jun 2026
*Tech: Python, OpenCV, Scikit-learn, NumPy, Flask*

- Engineered a computer-vision classification pipeline to distinguish genuine photographs from screen recaptures using handcrafted frequency-, texture-, color-, and edge-based features, achieving **94.97% validation accuracy**.
- Designed and evaluated a Soft-Voting Ensemble combining SVM, Gradient Boosting, and Random Forest, trained on a **991-image augmented dataset** with synthetic moiré and color-shift generation.
- Evaluated model efficiency and inference performance, achieving **<5 ms model inference on CPU** excluding image decoding for lightweight deployment.

**EduRide – Full-Stack MERN Ride Booking Platform** — Jan 2025 – Apr 2025
*Tech: React.js, Vite, Node.js, Express.js, MongoDB, RESTful APIs, JWT Authentication, RBAC, Socket.IO*

- Developed a full-stack ride-booking platform with JWT authentication, role-based access control (RBAC), RESTful APIs, and MongoDB for scalable ride scheduling and matching.
- Implemented real-time ride updates using Socket.IO and integrated map services for dynamic fare estimation and live driver-rider coordination.

**Plant Disease Detection** — Oct 2025 – Nov 2025
*Tech: Python, TensorFlow, CNN, Streamlit, Computer Vision*

- Engineered a CNN-based machine learning application using TensorFlow to classify **38 plant diseases across 14 crop species**.
- Built an automated deployment pipeline to serve a **547MB CNN model** on Streamlit Community Cloud using dynamic model fetching to overcome storage constraints.

## Certifications

Java • JavaScript • React.js • SQL • Problem Solving • AI/ML
