Education

Bennett University, Greater Noida — 2023 – 2027
B.Tech (CSE – AI) | CGPA: 8.39 — Uttar Pradesh
C.P. Vidya Niketan, Kaimganj – 12th (80%) — 2022 – 2023
C.P. Vidya Niketan, Kaimganj – 10th (88%) — 2020 – 2021

Skills

• HTML • CSS • SQL• Python • Machine Learning • Java (Basic) • Deep Learning • OpenCV • MongoDB • LLM • React.js • Node.js • REST APIs • Git/GitHub

Projects

AI Meeting Intelligence System **(Feb 2026 – April 2026)**

Tech: JavaScript, Node.js, React.js, Groq Whisper, LLaMA, SQLite, JWT, AES-256, Render

- Engineered an audio-to-summary pipeline using Groq Whisper and parallel multi-model LLaMA inference (17B, 8B, 70B), supporting 15 customizable summary formats.
- Implemented secure JWT-based authentication with AES-256 encryption and deployed via CI/CD on Render, reducing manual documentation effort by 80%

Face Recognition Attendance System **(Aug 2025 – Oct 2025)**

Tech: Python, OpenCV, Firebase

- Built a real-time face recognition attendance system with automated marking and optimized image processing for improved accuracy.

Multi-Model Emotion Detection System **(Sep 2025 - Nov 2025)**

Tech: Python, Deep Learning, Computer Vision

• Implemented multi-face emotion detection and classification using deep learning-based multimodal techniques.

EduRide – Ride Booking Backend System **(Jan 2025 – April 2025)**

Tech: MERN Stack (React + Vite, Node.js, Express, MongoDB), JWT Authentication

• Built a modular ride-booking backend to manage user and captain workflows, implementing secure JWT authentication and REST APIs for registration, login, and ride lifecycle management.

• Integrated map-based services for fare estimation and distance calculation, enabling dynamic ride creation and supporting concurrent API requests through a scalable architecture.

Travel & Tourism Management System **(Jan 2024 - Feb 2024)**

Tech: Web Development

• Designed a web application to manage travel bookings, itineraries, and trip planning workflows.

Plant Disease Detection **(Oct 2025 - Nov 2025)**

Tech: Deep Learning, CNN, Computer Vision

• Developing a CNN-based plant disease classification system using the PlantVillage dataset.

CERTIFICATIONS

• Java • SQL • Problem Solving • JavaScript • React.js • AI / ML
