Akagra Gangwar

6307642624 | akagraace@gmail.com | LinkedIn | GitHub | LeetCode

Professional Summary

Computer Science Engineering (AI & ML) undergraduate specializing in backend development and applied machine learning. Skilled in designing REST APIs, JWT/RBAC-secured systems, and server-side architecture with Node.js, Express.js, and MongoDB, alongside AI-powered systems built with Python, TensorFlow, Computer Vision, and LLM APIs (RAG, Prompt Engineering). Strong foundation in Data Structures & Algorithms, OOP, and DBMS, with hands-on Git and GitHub experience.

Education

Bennett University — Greater Noida, Uttar Pradesh
B.Tech in Computer Science Engineering (AI & ML) | CGPA: 8.39 — *2023 – 2027*

C.P. Vidya Niketan, Kaimganj — Uttar Pradesh
12th Standard – 80% — *2022 – 2023*

C.P. Vidya Niketan, Kaimganj — Uttar Pradesh
10th Standard – 88% — *2020 – 2021*

Skills

Languages: Java, Python, JavaScript, SQL
Backend & APIs: Node.js, Express.js, REST APIs, MongoDB, Firebase Realtime Database, React.js, Vite
AI/ML: Machine Learning, TensorFlow, Computer Vision, LLM APIs, RAG, Prompt Engineering
Core CS: Data Structures & Algorithms, OOP, DBMS, Algorithmic Problem Solving
Software Engineering: JWT, RBAC, Git, GitHub, Postman
Tools & Libraries: OpenCV, NumPy, Scikit-learn, FFmpeg

Projects

AI-Powered Meeting Intelligence — Feb 2026 – Apr 2026
Tech: Node.js, Express.js, React.js, Groq API, LLaMA, Whisper, FFmpeg, JWT, AES-256
- Engineered a backend pipeline for speech-to-intelligence processing using Node.js, Express.js, Whisper, and the Groq API (LLaMA), exposing REST endpoints that power 15+ customizable output formats and cut manual documentation effort by 80%.
- Automated audio preprocessing with FFmpeg to compress uploads from up to 200MB to under the 25MB API limit, achieving 100% upload success.
- Implemented JWT authentication and AES-256 encryption for API keys, with separate local and production database configurations for secure deployment.

EduRide – Ride Booking Platform (MERN) — Jan 2025 – Apr 2025
Tech: Node.js, Express.js, MongoDB, REST APIs, JWT, RBAC, Socket.IO, React.js, Vite
- Architected RESTful backend services with Node.js, Express.js, and MongoDB to power core ride-booking, matching, and fare-estimation workflows for a full-stack platform.
- Implemented JWT-based authentication and role-based access control (RBAC) to secure API endpoints and application functionality.
- Built real-time backend event handling with Socket.IO for live ride updates, integrated with map services for dynamic fare estimation and ride coordination.

Face Recognition Attendance System — Aug 2025 – Oct 2025
Tech: Python, OpenCV, Face Recognition, Firebase Realtime Database, NumPy
- Developed a real-time attendance system using OpenCV and face recognition to detect and match student faces from live webcam feeds against pre-stored face encodings.
- Integrated Firebase Realtime Database as the backend data store to update attendance records and last-seen timestamps, with a custom GUI for live record display.

Plant Disease Detection — Oct 2025 – Nov 2025
Tech: Python, TensorFlow, CNN, Streamlit, Computer Vision
- Engineered a CNN-based deep learning application using TensorFlow to classify **38 plant diseases across 14 crop species**.
- Built an automated deployment pipeline to serve a **547MB CNN model** on Streamlit Community Cloud using dynamic model fetching to overcome storage constraints.

Certifications

Java • JavaScript • React.js• SQL • Problem Solving • AI/ML
